

Friendly, Step-by-Step Music Creation

Non-technical guide for creators who just want to make music, finish songs, and publish confidently.

Profile: First Song

Mode: Friendly Wizard

Goal: Upload/Record -
> Mix -> Master ->
Video

1) Quick Start (2 Minutes)

1. Open Echo Sound Lab and choose **First Song** profile.
2. Record a vocal or upload your track on the Single Track page.
3. Click the guided buttons in order: **Analyze, Mix, Master, Video**.
4. Export your final file or queue exports in the background.

Guided flow: Record/Upload -> Analyze -> Mix -> Master -> Video

2) Which Profile Should I Pick?

- **First Song:** most guided, best if this is your first time mixing/mastering.
- **Artist Fast Path:** fewer prompts, faster turnaround.
- **Engineer Advanced:** direct controls, logic-style workflow.

You can switch profiles anytime without losing your project.

3) Recording and Vocal Workflow

- Pick your input device (USB interface, headset, Bluetooth, built-in mic).
- Record multiple takes if needed.
- Enable **Smart Comping** to merge strongest phrases from multiple takes.
- Enable **Honest Tuner** for gentle pitch correction (musical, not robotic).
- Use **Vocal Textures** when you want a stylized layer.

4) Mixing and Mastering (Plain English)

- **Analyze:** finds what your track needs.
- **Mix:** balances tone, dynamics, and clarity.
- **Master:** final polish and playback safety.
- **What Changed:** explains before/after without technical jargon.
- **Active Chain:** shows exactly what was used.

If a process is blocked for safety, use **Fix Blocked Mix** to recover with safer settings.

5) Stems, Timeline, and Collaboration

- **Stem Splitter:** create vocals/drums/bass/other when original stems are missing.
- **Project Timeline:** rearrange sections quickly (intro/verse/chorus/outro).
- **Collaboration Panel:** generate share links, leave comments, compare revisions.

6) Background Export Queue + Safe Updates

- Queue WAV/MP3 exports while you continue editing.
- When a new app build is available, choose **Update Now** or **Later**.

- No forced kick-outs during active sessions.

7) Friendly Troubleshooting

- **No audio on mobile Safari:** tap the on-screen audio resume button.
- **Buttons disabled:** read inline reason text under the button.
- **Need support:** use **Copy Debug Info** in settings and share it with support.
- **Recover work:** Echo auto-saves and offers restore on relaunch.

8) Recommended Beginner Routine

1. Start with **First Song** profile.
2. Upload or record one track.
3. Run Analyze -> Mix -> Master.
4. A/B compare, then export WAV + MP3.
5. Open Video mode and create content clips.
